RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 48 pages. Original publisher: Pittsburgh, Pa. : H. John Heinz III School of Public Policy and Management, Carnegie Mellon Census Data Research Center, Carnegie Mellon University, 1998 OCLC Number: (OCoLC)243708579 Subject: Manufacturing industries -- Appalachian Region. Excerpt: . . . formation in the Region to the US. The LRD allows us to calculate plant entry and exit rates at 5-year intervals for the period beginning 1963 and ending in 1992. The entry rate is simply a measure of the portion of the existing plants in a region that opened in the previous five years. Similarly, the exit rate is the portion of plants in operation in a region 5 that went out of business over the next five years. We use the entry and exit rates in the US as a benchmark against which to compare entry and exit rates in Appalachia. Plant entry rates for US manufacturing establishments for each of the 5-year periods between 1963 and 1992 are reported in Table 4. We see that the US manufacturing sector is very dynamic. Over the sample period, new entrants in each 5-year period account for between 32 percent and 42 percent of all manufacturing establishments. In addition to a significant share of plants entering in each period, a significant portion of plants exit each period. Between 35 percent and 39 percent of all establishments exit in each 5-year period. This is evidence of significant turnover in the 6 manufacturing sector. Table 4 Establishment Entry Rates for the US Manufacturing Sector (Percent Change during Five-Year Period) 1963-67 1967-72 1972-77 1977-82 1982-87 1987-92 Period. 318. 391. 423. 381. 369. 387 Plant Entry Rate Figure 2 shows the employment associated with entrants for each 5-year period. These graphs...
