RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 104 pages. Original publisher: Houston, TX : Lunar and Planetary Institute ; Springfield, Va. : National Technical Information Service, distributor, 1989 OCLC Number: (OCoLC)60841640 Excerpt: . . . N90-16609 3 THE ORIGIN, COMPOSITION AND HISTORY OF COMETARY ICES FROM SPECTROSCOPIC STUDIES; L. J. Allamandola, Space Science Division, NASA-Ames Research Center, Moffett Field, California94035 The spectroscopic analysis of pristine cometary material provides a very important probe of the chemical identity of the material as well as of the physical and chemical conditions which prevailed during the comet's history. Concerning classical spectroscopy, the spectral regions which will most likely prove most useful are the infrared, the visible and ultraviolet, newer spectroscopic techniques which have the potential to provide equally important information include nuclear magnetic resonance (NMR) and electron spin resonance (ESR). This talk will summarize each spectroscopy with emphasis placed on the kind of information which can be obtained from each technique. The infrared should be the premier method of analysis as the mid-infrared absorption spectrum of a substance contains more global information about that substance's identity and structure than any other property. It was for...

Reviews

Good electronic book and valuable one. It is one of the most incredible publication we have read through. It is extremely difficult to leave it before concluding, once you begin to read the book.

-- **Mrs. Bridgette Rau MD**

This book will never be easy to start on reading but quite exciting to see. It is actually really intriguing through looking at period of time. Your daily life span will be convert once you total looking over this book.

-- **Torrance Vandervort**
