

Spray Drying of Fruit Juice with Vegetable Fibre as Carrier

Filesize: 3.75 MB

Reviews

It becomes an incredible publication that we actually have at any time read. It is one of the most incredible book i actually have go through. I am just delighted to tell you that this is actually the finest pdf i actually have read through within my personal life and might be he finest publication for actually.

(Prof. Hilma Robel)

SPRAY DRYING OF FRUIT JUICE WITH VEGETABLE FIBRE AS CARRIER

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Crystal Induction by dietary fibre in Spray Drying of fruit juice | The production of free flowing powder by spray drying of sugar-acid rich foods requires an appropriate carrier. High molecular weight materials such as maltodextrins are commercially used as a drying aid because of their higher glass transition temperature (T_g). Alternatively, fibre-rich by-products from fruit and vegetable juice processing might provide high molecular weight elements that are suitable as a drying support. Freeze dried carrot fibre was centrifugal-milled to 50-100 µm sizes. Fructose and apple juice concentrate were used in this study. The fibre seemed to show as crystal induction in the spray drying products of the two materials. Dried sucrose, glucose and fructose were used to study glass transition temperature of melted amorphous sugars and mixtures by the visual experiment and DSC at 0.1°Cmin⁻¹ of heating and cooling scans. The Gordon-Taylor equation and the Coachman and Karaze equation were used to predict T_g of sugar mixtures. Dielectric analysis in the range 200 Hz -1 MHz between 10-105 ° C were applied to find the onset T_g (based on DSC results) from freeze dried mixtures of carrot fibre+fructose. | Format: Paperback | Language/Sprache: english | 224 pp.
