

South Africa Operational Plan Report Fy 2013

Filesize: 1.75 MB

Reviews

This publication is worth getting. This is certainly for those who state that there was not a well worth studying. Its been written in an exceptionally simple way in fact it is only after i finished reading through this ebook in which in fact transformed me, modify the way i believe.

Createspace, United States, 2014. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.South Africa has four concurrent health burdens that heavily impact the health sector - HIV/AIDS and TB, poverty related illnesses (perinatal, neonatal, childhood, and maternal diseases), non-communicable diseases, and violence and injury. South Africa continues to grapple with massive health inequities, a legacy of apartheid. There are marked differences in rates of disease and mortality between races (National Planning Commission Report, 2011). [Redacted] Child mortality initially increased from the MDG baseline in 1990 of 60 deaths under the age of 5 years per 1,000 live births, peaked at 82 deaths/1,000 births in 2003, and finally decreased to 57 deaths/1,000 births in 2010. The maternal mortality ratio is an estimated 310 maternal deaths per 100,000 live births (2008) . HIV and its related diseases contribute significantly to maternal mortality (50 %) and mortality under five years of age (35 %). South Africa has a population of nearly 52 million and the largest HIV epidemic in the world, with approximately 5.7 million people living with HIV (PLHIV). Similar to other generalized, hyper-endemic HIV epidemics, the South African epidemic is largely driven by heterosexual transmission. HIV prevalence among the adult population (15-49 years) is estimated to be 16.6 %, with an estimated HIV incidence of 1.4 in 2011, though prevalence and incidence vary significantly across geographic areas with 54 % of PLHIV living in Gauteng and KwaZulu Natal Provinces. Antenatal HIV prevalence has stabilized around 30 over the past four years with women and girls bearing approximately 60 % of the overall HIV disease burden. There are a number of underlying behavioral, socio-cultural, economic, and structural factors that influence risk for HIV transmission. Risk factors include mobility and migration, race, economic and educational...
