Patent, 637,349. Spec. British Patent. 5. 0. April, 1809. windings, one winding surrounding the whole of each mainpolar projection, and the other winding surrounding one-half or a part of each of two adjacent main polar projections, combined with means whereby the latter winding is joined in series with the armature winding when the motor is started and replaced by the first mentioned winding when synchronism is attained. A general idea of the British T. II. Patent referred to, may be obtained by an inspection of Figure 72. This patent has to do with improvements in self-starting devices, by the introduction of certain combinations of inductance and condensance, or of resistance and reactance in parallel with the...

Reviews

This published pdf is wonderful. it was writtern really completely and valuable. I found out this book from my dad and i recommended this pdf to find out.
-- **Dr. Bryon Gleichner**

This publication will never be straightforward to get going on looking at but really fun to see. This can be for all those who statte that there had not been a worth looking at. You wont really feel monotony at at any moment of your own time (that's what catalogs are for about should you request me).
